Ionic Footbath by Salus Per Aquam (SPA)

Ionic footbaths create negative and positive ions, which assist with removal of heavy metals and toxins. More than ever before, we are being exposed to heavy metals, chemicals, and pollutants from our food, air, and water. The rate at which bodies are able to eliminate toxins can be slow, especially if you are not ambulatory. To assist with the process, ionic footbaths are effective, non-invasive, and provide benefit to you and your family.

The ionic spa only takes 15 minutes compared to other units that take 30 minutes. The majority of pores on the body are on the soles of your feet so negative and positive ions can quickly activate a release of acidity, inflammation, and toxins from your body. Please note that the lack of color or specific colors in the water does not mean the unit is not working. Most of the water’s color change is from the ionic process and not solely your toxins.

**What Can The Ionic SPA Do For You?**

- Detoxify heavy metals and chemicals
- Reduce inflammation
- Increase energy
- Increase oxygen in the body
- Help relieve pain
- Improve sleep
- Reduce unwanted fluid retention
- Relieve headaches
- Balance the immune system
- Safe for children ages 4 and up

**Positive Ions**

- Help in hydration
- Kill bacteria and fungus on contact
- Soothe the nerves
- Used as a medical disinfectant

**Negative Ions**

- Stimulate the nerves
- Increase blood circulation
- Soften tissue

**Purchase Price**
Price is **$595.00 (includes tub)**. To purchase a unit click on the Buy Now button on the store page under Ionic S.P.A.

**Directions for the Salus Per Aquam Ionic Foot Spa**

Put warm tap water into your foot tub so that it fully covers the ionizer (white stick). Make sure you put enough water to cover the ionizer but not too much to spill water out when you put your feet in. With white ionizer covered with the warm water connect the cord into the AC/DC converter and plug into the electrical outlet. If you see small bubbles coming out from the ionizer into the water your unit is working properly.

Soak feet for only 15 minutes once a week for those with autoimmune, cancer, or chronic health conditions. For those that are healthy and being preventive soak your feet once every 10 days. After footbath wipe your feet off with a clean towel, unplug your unit, and wash white ionizer and foot tub with warm soapy water and rinse well.

Included in your package is a small rubber piece called a doubler that connects on both ends. **Use this doubler on every other use as it will wear out the rods more evenly.** Just plug it to the end of the AC/DC adapter plug and the other end of the ionizer cord.

**Troubleshooting:**

There is a Red light on the AC/DC converter – if this ever turns off then the water is too salty (or too many minerals).

1. Add distilled or spring water or
2. Pull the ionizer slightly out of the water and the red light should reappear and bubbles are seen.
3. Make sure all parts of the AC/DC converter are plugged in properly.

If the red light is on but there are no bubbles and the water has little or no minerals (distilled water) then add up to but no more than ¼ tsp of salt or baking soda. If all else fails, call the manufacturer at 877-694-3298 for assistance.

**Length of Time the Unit Lasts Before Needing To Replace:**

The unit lasts 250-300 uses. Eventually you will see that the bubbles stop appearing when you plug the unit in, and the rods inside the white tube will start to disintegrate. At that point save the AC/DC electrical plug-in and doubler, and call the manufacturer at 877-694-3298 to replace the graphite rod. The replacement cost is $130 and will give you another 250-300 uses.
